# RDG Guidance Note: Investigation of Station Stopping Incidents

RDG-OPS-GN-009 Issue 04 – May 2020

# About this document

### **Explanatory Note**

The Rail Delivery Group is not a regulatory body and compliance with Guidance Notes or Approved Codes of Practice is not mandatory; they reflect good practice and are advisory only. Users are recommended to evaluate the guidance against their own arrangements in a structured and systematic way, noting that parts of the guidance may not be appropriate to their operations. It is recommended that this process of evaluation and any subsequent decision to adopt (or not adopt) elements of the guidance should be documented. Compliance with any or all of the contents herein, is entirely at an organisation's own discretion.

Other Guidance Notes or Approved Codes of Practice are available on the Rail Delivery Group (RDG) website.

#### **Executive Summary:**

This Guidance Note provides advice on the investigation of station stopping incidents along with a suggested template form for capturing of the relevant information. In so doing, it seeks to encourage consistency across the industry.

### **Issue Record**

| Issue | Date           | Comments  |
|-------|----------------|---|
| One   | September 2006 | First published version   |
| Two   | February 2013  | Reviewed and amended to include Stop short and release doors and wrongside door release   |
| Three | April 2016     | Reviewed and updated to include different methods of door operation and control   |
| Four  | May 2020       | Reviewed and amended to clarify Driver Controlled Operation (DCO) and submission of report to industry stakeholders. Updated to RDG format. |

This document is reviewed on a regular 3-year cycle.

#### **Prepared by:**

Andrew Graham Industry Operations Partner, Rail Delivery Group

# **1** Purpose and Definitions

### 1.1 Purpose

This Guidance Note is intended to promote the adoption of standard procedures for the reporting and investigation of station stopping incidents across the industry, along with a common definition of what is meant by these terms. In particular, it provides a suggested template for the capture of all data needed to support such investigations – see Appendix A.

### 1.2 Definitions

**Station Stopping Incident:** An overall term that covers Fail to Call, Station overrun, Stop Short and release doors and wrongside door release incidents.

**Operational platform:** The term for the area of a level platform that is available for passenger use and has been identified as part of the train dispatch area and/or the operation of the train.

**Staff responsible for door release:** This could be the driver of a Driver Only Operation (DOO) or Driver Controlled Operation (DCO) service or guard, conductor, train manager etc responsible for opening the doors.

**Fail/failure to Call:** Failure of a train to make a booked station stop in cases where the driver has made no attempt to apply the brake.

**Station Overrun Protected:** Event in which a train which the driver is attempting to bring to a stand at a station stop proceeds beyond the designated stopping point such that any door(s) intended to be for passenger use at that station is no longer on the operational platform and the staff responsible for door release has not opened the doors or Selective Door Operation (SDO) or Automatic Selective Door Operation (ASDO) has prevented the incorrect doors from being opened in error.

**Station Overrun Non-Protected:** Event in which a train which the driver is attempting to bring to a stand at a station stop proceeds beyond the designated stopping point such that any door(s) intended to be for passenger use at that station is no longer on the operational platform and have been released or opened by the staff responsible.

**Stop Short Protected:** Event in which a train comes to a stand prior to the designated stopping point such that some carriages are not adjacent to the operational platform. The doors that are available can be used safely for passenger egress due to the staff responsible for door release not releasing or opening the doors or SDO or ASDO has prevented the incorrect doors from being opened in error.

**Stop Short Non-Protected:** Event in which a train comes to a stand prior to the designated stopping point such that some carriages are not adjacent to the operational platform and are released or opened by the staff responsible.

Wrongside Door Release: Event in which the train doors are released on the side of the train that is not adjacent to the platform.

Note: The above definition of station overrun excludes overruns at stations with short platforms where the designated stopping point is beyond the end of the platform (i.e. positioned so that the rear rather than front of the train is alongside the platform). As an example, if passengers on an 8 car train have been advised to alight from the rear 5 coaches at a particular station but bringing the train to a stand at the designated stopping point clearly does not constitute a station overrun, even though the front 3 coaches are beyond the platform. However if the train is brought to a stand beyond the designated stopping point such that any of the doors in these 5 coaches are no longer adjacent to the platform, then that constitutes an overrun.

# 2 Investigations

### 2.1 Fail to Calls

.

It is recommended that failures to call be investigated in a similar manner to other station stopping incidents. While many such incidents will result from a failure on the part of the driver which has no direct safety implications (such as misreading of the train's schedule), there may be cases where there is ambiguity as to whether a particular incident was the result of a driver making no to attempt to stop at all, or alternatively failing to manage to do so correctly. The form in Appendix A is accordingly designed to be used for all station stopping incidents.

### 2.2 Significant Operating Incident Occurring as a result of a Station Stopping Incident

If a station stopping incident results in a significant operating incident such as a SPAD or a collision then the investigation procedures for these types of incidents should be applied rather than those referred to in this document, however the contents of this document may be used as an aide memoire.

### 2.3 Action to be Taken Immediately Following a Station Stopping Incident

It is recommended that in the event of any reported station stopping incident the driver concerned should be seen by a responsible Manager at the first available opportunity and an interview carried out to determine:

- the immediate cause (as reported by the driver)
- for station overruns only:
  - the distance overrun,
  - whether the train set back, and if so, whether authority was requested/obtained from the signaller,
  - whether the driver changed ends.
- for stop short and release doors, and wrongside door release:
  - Whether any passengers alighted from a passenger door that was not adjacent to the level platform.
  - Whether the area surrounding the train was checked for passengers that may have fallen/alighted from the train prior to any further movements taking place.

The staff responsible for the incident's fitness to continue duty should also be assessed.

The driver, along with other staff if appropriate, must complete a written report of the circumstances as soon as practicable after the incident and as a minimum prior to booking off duty.

## 2.4 On Train Data Recorder (OTDR)

OTDR data must be downloaded when a station stopping incident is reported.

#### 2.5 Investigation Procedure

A competent person must be appointed to investigate a station stopping incident. All relevant sections of the form provided in Appendix A should be completed.

When completed, it should be submitted for internal sign off according to individual Company procedures and as appropriate to Network Rail and other Industry Stakeholders for acceptance of the conclusion and any recommendations that may apply to them. Incident details and the investigation conclusions and recommendations must be input to Safety Management Intelligence System (SMIS).

#### 2.6 Liaison with Network Rail and other Industry Stakeholders

The person appointed to conduct the investigation should liaise, as appropriate with Network Rail and other Industry Stakeholders, to establish and discuss the circumstances. In particular, the results of

any Network Rail led investigations into the state of the infrastructure (swab test, eddy current test, etc.) can provide valuable evidence of railhead conditions and an indication as to the operation of ontrain sanding equipment.

## 2.7 Sources of Evidence

In conducting the investigation, the investigator should consider the following as additional potential sources of evidence in addition to reports from staff involved:

- OTDR data
- CCTV images from station and/or train internal CCTV
- Forward Facing / Rear Facing CCTV
- Signallers' and witness' reports, including Guards and Train Dispatchers
- Evidence of causes of distraction (internal / external)
  - Mobile phone records (for examples calls / texts)
  - Authorised / unauthorised cab visitors
- Voice recordings
- Employee Medical Results
- Railhead Swab Test results this may need to be specifically requested from Network Rail
- Operation of the Rail Head Treatment Train (RHTT) on affected or adjacent lines
- Driver's schedule card / train list being used
- Any Not to Stop / Special Stop Orders that may have been issued
- TOC/FOC/Network Rail Control Centre Log Entry or P2/CCF replays
- Medical Examination
- Fatigue Risk Index data
- Competence Management System (CMS) documentation
- Fleet Engineering
  - A technical report must be obtained to substantiate any allegations of a defect on the train
  - Dependent on the nature and/or seriousness of the incident, consideration should also be given to requesting a download of data held in Train Management and Brake Control Systems (where available)
  - Correct operation and status of sanding equipment

# Appendix A

## **Template Form for Investigation of Station Stopping Incidents**

Please note the following form has been designed to be completed electronically as a Word form. Where indicated, guidance text for completion of the form is provided with the instruction that it be deleted from individual completed report.

#### Part 6 - Summary of events

The information (evidence) presented should follow a sequence of events. The aim is to tell a logical story of what happened. This can be based upon a simple timeline to make sure key facts are included in the correct order. Follow this up with any other factors that have emerged during the course of the investigation that do not naturally fit in the story. The information presented in this section should relate to, and support the conclusions.

#### Insert text as appropriate.

#### Part 7 - Factors for consideration

This section is to highlight for the reader how information has been correlated and cross-referenced in order to make sound judgements. It needs to highlight conflicting information and where information is missing.

Insert text as appropriate.

#### Part 8 - Conclusions and causes

Avoid using single line statements in this section where possible and make sure that the cause is properly described. This should cover two key elements, i.e.

- 1. Immediate cause: An unsafe act and/or condition that directly resulted in the occurrence of the event. Concentrate on the people involved and the environment in which they work. There can be more than one such cause. (Make sure there is a 'because' and not just a statement of fact)
- 2. Underlying cause: This relates to the underlying conditions and issues which caused or allowed the unsafe act or condition to occur. Consider: management and supervisory practice, job planning, equipment maintenance and other human factor influences

When stating and explaining the causes, there should be a focus on what needs to be improved as much as on what went wrong. This method softens the impact to the reader and removes any emotion from the report.

Insert text as appropriate.

#### Part 9 - Other factors

In this section, record any other issues that were noted in the summary of events, which needs improving, although it did not form part of the identified causes (Part 8).

Insert text as appropriate

#### Part 10 - Required action to address non-compliances

This section states the actions required to address issues of non-compliance. This is where an existing control measure is already in place and has not been followed (e.g. a rule, regulation or process). Non-compliances differ significantly from recommendations, as the existing control measures are deemed adequate and robust. All actions stated under this section are mandated.

Make short two or three line statements.

Between this section and that containing the recommendations (Part 11), all the issues identified in Part 8 (causes) and Part 9 (other factors) must be addressed.

Insert text as appropriate.

#### Part 11 - Recommendations

This section documents suggested changes that focus on improvement to existing controls or the introduction of new controls. Sometimes reasoning for your suggestions may be necessary. Make short two or three line statements.

Always make sure the recommendation has a champion identified.

Between this section and non-compliances, all the issues identified in Part 8 (causes) and Part 9 (other factors) must be addressed.

Remember, recommendations should be SMART. (Specific, Measurable, Achievable, Realistic and Timebound)

Insert text as appropriate.
